

FY 2025 Financial and Production Results

For the year ending 31 December 2025

Issued 25 February 2026

ROM coal production of 67.0 million tonnes

(100% basis), up 7% from 2024.

Saleable production of 50.8 million tonnes

(100% basis), up 6% from 2024.

Attributable saleable coal production of

38.6 million tonnes, up 5% from 2024; in top quartile of guidance.

Revenue of \$5.95 billion¹, down 13% from 2024; following a 17% decrease in **realised coal price to \$146 per tonne**.

Operating EBITDA of \$1,437 million and EBITDA margin of 24% despite a year of low international coal prices.

Cash operating costs of \$92 per tonne

(exc. Government royalties), down \$1 per tonne from 2024, and below the mid-point of guidance, driven by increased volumes and productivity improvements partially offset by increased demurrage costs mid-year.

\$2.1 billion cash balance at 31 December 2025

The Board has declared a fully-franked final dividend of \$161 million, or A\$0.122 per share; combined with the interim dividend this is a 55% payout ratio for 2025.

2026 Production Guidance

- 36.5-40.5Mt attributable saleable production - the 2026 profile builds on the 2025 performance.
- \$90-98/tonne cash operating costs - allows for some cost inflation in 2026.
- \$750-900 million attributable capital expenditure - includes expenditure which slipped from 2025 to 2026.

CEO Comment

We delivered record coal production in 2025 that was close to the top of our guidance range. This was built on consistent performance, starting with our highest first-half production in the past five years and concluded with a record fourth quarter. These stronger volumes offset inflationary factors and delivered a 1% decrease in our cash operating costs.

We aim to carry this operational momentum into 2026. The top end of our 2026 guidance range is near the annual operational limits of our mines, while the lower end allows for unforeseen issues. Despite remaining focused on cost control, we do expect some incremental cost inflation this year.

Although international coal markets remain well supplied, coal price indices have recently improved. We continue working with our customers to meet their requirements and to optimise our product mix to suit market conditions.

During 2025, we returned A\$769 million dollars to shareholders via the fully franked 2024 final dividend (A\$0.52/sh) and fully franked 2025 interim dividend (A\$0.062/sh).

The Board has elected to return A\$161 million (A\$0.122/sh) to shareholders as a fully-franked 2025 final dividend. The 55% payout ratio for 2025 is consistent with our dividend policy.²

Given coal market conditions, we were pleased to end 2025 with cash balance of \$2.1 billion; combined with debt market access it provides considerable future funding capacity.

In 2025, we delivered against our operational guidance, provided dividends in accordance with our Constitution, and built a capital position that will enable us to pursue growth opportunities.

In 2026, we target continued strong operational performance and, should suitable circumstances arise, judiciously utilise our cash for the benefit of shareholders.
